# Wood Soap Intensive

## Cleaning & Maintaining

Schotten & Hansen Wood Soap Intensive is a concentrate for the regular maintenance cleaning of all soft- and hardwood interior surfaces. In addition to the cleaning effect, the high ratio of natural wax protects the surface against staining and increases the shine when polished after cleaning.

Description	Art. Nr. EU + UK	Art. Nr. USA	Quantity
Wood Soap Intensive (small)	31192	31230	200 ml (7 fl. oz.)
Wood Soap Intensive (medium)	31190	31229	1 l (34 fl. oz.)
Wood Soap Intensive (large)	31191	31231	5 l (1.3 gal.)

## How to apply to wooden surfaces (flooring & furniture)

First, shake the Wood Soap Intensive well and add 30 ml (1 fl. oz.) of the concentrate to 2 l (70 fl. oz.) of hot water. As soon as the wiping water is dirty, it should be replaced. Use a cotton mop or cotton cloth (not microfibre) to wipe the surface with the solution until uniformly damp. Due to the open-pored nature of Schotten & Hansen wooden surfaces, please make sure to wipe wet. We recommend wiping it a second time with a damp cloth to absorb the remaining dirty water. If more gloss is required, the surface can be dry-polished with a polishing machine, a cotton cloth, or a white polishing pad.

Before using the Wood Soap Intensive on wooden surfaces from other manufacturers, we recommend testing the effect on an invisible area first.

For highly-frequented areas, e.g. public areas such as a hotel lobby or a sales area, we recommend increasing the concentration of the Wood Soap Intensive (approx. double concentration) and cleaning with a polishing machine (white pad, sisal brush) once a week. The drying time between cleaning and polishing should be at least 2 hours. These steps make the surface even more resistant to dirt and moisture over time. With regular and correct use, the Wood Soap Intensive retains the original beauty of wooden surfaces.

We recommend to use Wood Soap Intensive once every 3 months, in case of heavy soiling max. once a month. In commercially used, highly frequented areas, the product can be used up to once a week.

1.  shake well before using
  2.  30 ml Wood Soap Intensive / 2 l hot water
  3.  wash wet
  4.  absorb dirty water
  5.  let dry 2 h
- optional  polishing

# Wood Soap Intensive

## Yield

1 l of Wood Soap Intensive cleans approx. 1600 m<sup>2</sup>. This figure may vary depending on the condition and absorbency of the wooden surface.

## Further information for Schotten & Hansen wooden surfaces

Wooden surfaces treated with Schotten & Hansen Wood Polish should only be cleaned with Schotten & Hansen cleaning and care products. You can purchase cleaning accessories such as mops and buckets from our webshop.

- Aggressive, alkaline or solvent-based cleaning products can damage polish on wooden surfaces.
- Remove dirt from the floor or furniture surfaces as soon as possible to prevent staining.
- Avoid cleaning with microfibres or partial use of cleaning sponges.
- Remove standing water and puddles as quickly as possible and protect your wooden surfaces from constant moisture.

## Frequently asked questions:

(Applicable to Schotten & Hansen wooden surfaces)

Why are some parts of the floor still marked or dirty after cleaning?

We recommend wiping the persistent stains more often and letting the water soak in a little longer before wiping again to absorb the dirty water. This should improve or remedy the situation. Never use partial abrasive cleaners or scouring pads, as this can damage the surface of the floor and remove colour pigments that have been elaborately worked into the surface. This can cause areas of light staining.

What to do if stains cannot be removed after maintenance cleaning with Wood Soap Intensive?

In such cases, we advise you to contact our service department for further advice.
