Wood Soap Wax

Clean & Maintain

Schotten & Hansen Wood Soap Wax is a concentrate for the regular maintenance cleaning of all soft- and hardwood surfaces. In addition to the cleaning effect, the high ratio of natural wax protects the surface against staining and increases the shine when polished after cleaning.

Product	Art. Nr.	Yield
Wood Soap Wax (small)	31230	300 mL
Wood Soap Wax (medium)	31229	1 Litre
Wood Soap Wax (large)	31231	5 Litres

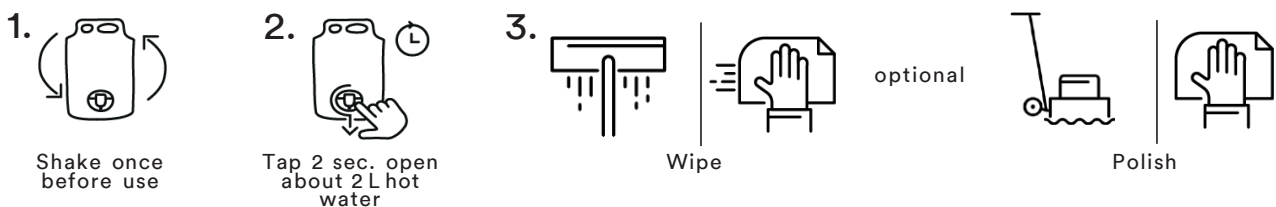

How to apply to wooden surfaces (flooring & furniture)

First, shake the Wood Soap Wax well and add 30 mL of the concentrate to 2 L of hot water. If using a stand-pouch instead, open the tap for 2 seconds over hot water. Use a cotton mop or cotton cloth (no microfibre) to wipe the surface with the solution until uniformly damp. Due to the open-pored nature of Schotten & Hansen wooden surfaces, please make sure to wipe wet. We recommend wiping a second time with a damp cloth to absorb the remaining dirty water. If more gloss is desired, dry-polish the surface with a polishing machine, a cotton cloth, or a white polishing pad.

Wood Soap Wax is a cleaning concentrate and should be diluted accordingly, to avoid the surface becoming tacky. Before using the Wood Soap Wax on wooden surfaces from other manufacturers, we recommend testing the effect first on an invisible area.

For highly-frequented areas such as a hotel lobby or a sales area, we recommend increasing the concentration of the Wood Soap Wax (approx. 100 mL Wood Soap Wax to 5 L of hot water). After cleaning polish with a polishing machine (white pad, sisal brush) once a week. Ensure a drying time of at least 2 hours between cleaning and polishing.

These steps make the surface even more resistant to dirt and moisture over time. With regular and correct use, the Wood Soap Wax retains the original beauty and shine of wooden surfaces.

Yield

Approx. 400 m² can be cleaned with 1 Litre of Wood Soap. This figure may vary depending on the condition and absorbency of the wood surface. For heavier soiling, increase the concentration.

Wood Soap Wax

Further information for Schotten & Hansen wooden surfaces

Wooden surfaces treated with Schotten & Hansen Wood Polish should only be cleaned with Schotten & Hansen cleaning and care products. You can purchase the necessary accessories (mop, bucket, ...) from us. Aggressive, alkaline or solvent-based cleaning products can damage the Wood Polish surface. Remove dirt from the floor or furniture surfaces as soon as possible to prevent staining. Avoid cleaning with microfibrils or partial use of cleaning sponges. Remove standing water and puddles as quickly as possible and protect your wooden surfaces from constant moisture.

Frequently asked questions:

(Applicable to Schotten & Hansen wooden surfaces) **Why does the floor not clean properly in some places after cleaning?**

We recommend wiping the stubborn stains more often and letting the water soak in a little longer before wiping again to absorb the dirty water. This should improve or remedy the situation. Never use partial abrasive cleaners or scouring pads, as this can damage the surface of the floor and remove colour pigments that have been elaborately worked into the surface. This can lead to disturbing light stains.

What to do if stains cannot be removed after maintenance cleaning?

In such cases we advise you to contact the service department of Schotten & Hansen for advice.
